

Press Release ISO 9001:2015

GHM GROUP makes measurement precision the standard.

When two people do the same thing it is far from being identical. The same holds true for measuring devices. That is, unless you rely on technology from GHM GROUP. The company provides constant measurement precision based on strict quality management: certified with a letter and seal according to the new version of ISO 9001:2015.

When world of measuring technology was less clear, the founders of measuring technology companies staked their name on the excellence of their products. After all, the spirit and the power of innovation of individual creative people still shaped the quality of entire product categories. However, as unit quantities in production increased and with networked use in modern industry, an additional aspect has increasingly come into focus: the problem of spread for standard factory models with high unit quantities.

Constant quality is the standard

GHM GROUP meets this challenge with a quality management and quality assurance system which has enabled it to become one of the world's most renowned providers of industrial measuring technology. While every precision instrument was once finely adjusted by hand, automated processes for measuring devices and sensors now ensure consistently high quality.

They are the result of defined processes in production based on high-efficiency quality assurance processes. GHM GROUP is certified according to the latest version of the standard ISO 9001:2015, which replaced the old version ISO 9001:2008. The re-certification took place for 12 locations worldwide – the group headquarter, four production locations and seven international subsidiaries. The revision entails changes and effects relating to the quality management in accordance with ISO 9001 and is relevant for companies of all sizes, worldwide.

With increased content and structural changes, the revision of ISO 9001 has been made in response to the dynamic, complex market conditions in which many companies currently operate.

Therefore, ISO 9001:2015 is the most important standard in quality management, both nationally and internationally. Certification of GHM GROUP in accordance with ISO 9001:2015 is a strong foundation for the continuous improvement process of the company's internal quality management system. It begins with extensive incoming goods inspection for all raw materials and products delivered for production.

This procedure is a recurrent theme throughout the entire production process to the final inspection. In the process, the production process is divided into milestones in which permanently defined quality standards are fulfilled and for which documentation is mandatory. An external inspection authority conducts audits regularly to ensure that all production steps and controls conform to the ISO standard.

'We have taken on the task of placing higher demands on ourselves than those of our customers and the market. Our day-to-day work is based on our quality management system in accordance with ISO 9001:2015.' Certification Project Manager Dr. Hans Müller.

Quality assurance: more about the process than the result

What sounds like rigid rules is actually a highly dynamic process. The complete documentation permits systematic product and process optimization on a high level. With the total quality system, GHM GROUP relies on traditional production methods and sets new standards for quality, efficiency and production time with the innovative cell production. In combination with agile management and special productivity and business methods which enable maximum adaptability and individuality, GHM GROUP continuously optimizes its processes and combines them in a seemingly contradictory manner: flexibility in production with standardization in quality.

Both provide the customers of GHM GROUP with maximum security: production takes place at a constantly high quality level regardless of the unit quantities. With minimal spread for standard factory modules, adjustments of the devices are only seldom necessary, which means production can take place with constantly high quality in large unit quantities and be integrated in production processes anywhere in the world. Quality is standard for GHM GROUP.

'The quality of our products and solutions is no coincidence. It is the standard. We consciously and actively utilize the stronger process alignment of ISO 9001:2015 in order to continuously improve our high quality claims,' said GHM GROUP Managing Director Johannes Overhues.

GHM GROUP – where quality and variety are the key variables

GHM GROUP is a pioneering specialist and complete provider for innovative measuring and regulation technology. With more than 330 employees in six locations in Germany and Italy, the company develops and produces a wide assortment of more than 2 000 high-quality device types for all significant areas of industrial sensors and electronics.

The customer is the company's primary focus

GHM GROUP continues in its consistent efforts to permanently advance measuring and control technology with innovative developments and application-specific solutions with high customer value. Efforts are centred on the development of customer-oriented solutions that are appropriate for the market and tailored to the high demands of industry and producing industry.

GHM Messtechnik GmbH is a pioneering specialist and complete provider for innovative measuring and regulation technology. With more than 330 employees in 15 locations worldwide, the company develops and produces a wide assortment of more than 2 000 high-quality device types for all significant areas of industrial sensors and electronics.

From the fusion of the Greisinger, Honsberg, Martens, Imtron, Delta OHM and Val.coO companies, the GHM GROUP still considers itself a tradition-oriented company. With an eye on the vision of the founders, the company continues in its consistent efforts to permanently advance measuring and regulation technology with innovative developments and application-specific solutions with high customer value.

The central focus is the bundling of technological expertise for development of customer-oriented solutions that are appropriate for the market and tailored to the high demands of industry and producing industry. In addition to long-term expertise and state-of-the-art production methods, the GHM GROUP offers competent application consultation and comprehensive customer service, high flexibility even for small part quantities, quick device adaptations and short delivery times. This is all offered at an outstanding price-performance ratio.
